Juris-M: European Union

This guide applies to Juris-M items set to the `EU.INT` jurisdiction. It covers the top tier of European institutions (currently only cases of the European Commission).

In production with Juris-M, use the `Abbreviation Filter` to transform or suppress jurisdiction names as appropriate.

Citation Forms

In the input guidance below, required fields are set in **boldface**; entries set in *italics* are optional.

Case

[Reported cases]

Required fields: **Case Name**, **Docket Number**, **Court**, **Call Number**, **Date Decided**, **Reporter**, **Issue**, **First Page**, and **Jurisdiction**.

Notes:

Case Name: The full name of the case to be shown in citations. Enter both parties, connected by `v.` as appropriate (with a period, to accomodate styles that use them).

Docket Number: This is the *case number* (not the number of the decision itself).

Court: If the name of the deciding body will ordinarily appear in Juris-M records as "European Commission." Use the `Abbreviation Filter` to transform this into the single word `Commission` for this jurisdiction.

Call Number: This is the number of the decision itself.

Date Decided: The date of the decision may be entered in full; only the year will be used when generating citations.

Reporter: Commission decisions are reported in the Official Journal of the European Union, L-series. The reporter name can be spelled out in full if desired, with an entry in the `Abbreviation Filter` to produce the citation form of `OJ L`.

Issue: The issue of the `OJ` in which the judgment is reported.

First Page: The starting page of the judgment in the `OJ`.

Court: The name of the court. This is set to appear in all citations, because some courts (such as `Bankr.`) should be shown. To suppress unwanted court names, use the abbreviation hack noted above. In Juris-M, court names are entered from a controlled list to assure consistency. Contact the project to request that courts be added to the listings.

Jurisdiction: The name of the jurisdiction. In Juris-M this is set from a controlled list, and selects this European Union citation stylesheet.
